

Upload Use Case

By: Hsuan Han Lai

BASIC COURSE:

The system displays Upload Page. The user selects a file. The user then clicks Upload. The system will upload the image to the system. The system displays the Main Page.

ALTERNATIVE COURSE:

User uploads an image that does not have a PNG or JPEG file extension: The system displays an error message and prompts the user to upload a file with a JPEG or PNG extension.

User selects the camera: The system invokes the camera feature of the user's device. The user takes an image. The system uploads the image automatically and displays the Main Page.

User clicks upload before selection: The system displays an error message and prompt the user to select a file.

User clicks the 'X' button: The system displays the Main Page.

System is unable to read the file: The system displays an error message and asks the user to try again.

System fails to upload image: The system displays an error message and asks the user to try again.

'Upload' - Robustness Diagram
