

Project Glossary

- Artificial intelligence model : A Machine Learning Model trained specifically to detect building blocks
- Building Blocks : Units that make up a website.
- Keywords : Terms that are pre-defined for user to use along with their building blocks
- Attributes: Features that enhance building block behaviour (ie. color : red, parallax)
- Application
- Generated Code : Code produced by the AI to represent an image using HTML/CSS/JS
- Image : a wire-frame sketch of a website, uploaded by the user
- Loading Page
- Result Page : The page that display the output source code (HTML / CSS / Javascript)
- Zip file : A compressed file containing all the code generated.
