

Analyze Blocks Use Case

By: Waqas A Latif

BASIC COURSE:

The system displays the Processing Page. The AI looks for the next building block. The AI gets the building block. The AI converts the building block into block data. AI stores the block data in the database. The system displays the detected building block in the Block Tab. The user clicks Generate Web Page. The system invokes the Generate Web Page Use Case.

ALTERNATIVE COURSE:

User clicks Generate Web Page before the AI completes detecting all building blocks: The system displays an error message.

The AI incorrectly detects building blocks: The user clicks Upload Again. The system invokes the Upload Use Case.

'Analyze Blocks' - Robustness Diagram
